WHEN IT COMES TO LOSING WEIGHT AND KEEPING IT OFF

“We’ve always had the WILL. Now we have another WAY.”

Pay as little as $25 per prescription.a

Managing your weight long term requires more than willpower alone. Saxenda® can help you not only lose weight, but keep it off.

Indications and Usage

What is Saxenda®?

Saxenda® (lixisenatide) injection 3 mg is an injectable prescription medicine that may help some adults with excess weight (BMI ≥27) who also have weight-related medical problems or obesity (BMI ≥30) lose weight and keep the weight off. Saxenda® should be used with a reduced-calorie meal plan and increased physical activity

- Saxenda® is not for the treatment of type 2 diabetes
- Saxenda® and Victoza® have the same active ingredient, liraglutide, and should not be used together
- Saxenda® should not be used with other GLP-1 receptor agonist medicines
- Saxenda® and insulin should not be used together
- It is not known if Saxenda® is safe and effective when taken with other prescription, over-the-counter, or herbal weight-loss products
- It is not known if Saxenda® changes your risk of heart problems or stroke or of death due to heart problems or stroke
- It is not known if Saxenda® can be used safely in people who have had pancreatitis
- It is not known if Saxenda® is safe and effective in children under 18 years of age. Saxenda® is not recommended for use in children

Please see additional Important Safety Information throughout and enclosed Prescribing Information, including Medication Guide.
Know where you are in the weight-loss cycle

1. DEFINING MOMENT
   I've made up my mind. It’s time to do this.

2. CONSIDERATION
   I’m feeling determined. I’m ready to consider the options I have available. I’ll choose the one to help me reach my goal.

3. MOMENTUM
   I see a difference in my weight and so do others. I can do this.

4. PLATEAU
   It’s getting harder and I’m not losing weight anymore. Life is getting in the way. This is really frustrating.
   **NOTE:** This is often where people may go back to their old ways.

5. COLLAPSE
   I’m tired of this. I can’t keep it up, so I’m not going to. And it’s a relief to stop trying so hard.

6. FATIGUE
   I feel exhausted and sad. I don’t even want to think about my weight right now. This is the end of the cycle, but a new defining moment can start it all over again.

Why is it so hard to lose weight and keep it off?

You know what it takes to lose weight. You may have been successful many times in the past, but the results haven’t lasted.

**DID YOU KNOW?** People with obesity generally make 7 serious attempts to lose weight over time

- Your metabolism slows down
- Your appetite hormone levels also change, making you feel more hungry and less full

These changes can lead you to regain the weight you’ve lost

How to break the cycle

Identify where you are in the weight-loss cycle and work with your health care provider to create a plan that works for you. Remember that being able to keep the weight off is also a success.

There’s more to weight loss than seeing a lower number on the scale

Reaching and maintaining a healthy weight can help improve or prevent many diseases and conditions, as well as improve your overall health.

In fact, a 5% weight loss may help improve some common conditions, such as high blood pressure and high cholesterol.

Find a long-term solution. Not a quick fix.

Lasting weight loss begins with a plan.

Patients who work with their health care provider tend to lose more weight than those who work on their own.

Talk to your health care provider.

- Bringing up your weight may seem uncomfortable, but it will help you work together to create a plan tailored to you.
- Consider sharing how your weight affects your daily life so he or she understands how important developing a plan is to you.

Try these tips to help get the conversation started.

**Explain** why you are looking for help with weight management.
TRY: “I’ve tried many weight-loss plans but haven’t been successful long term.”

**State** your needs—ask for what you need directly.
TRY: “I want to talk about possible weight-loss options that I haven’t tried yet.”

**Express** how you feel about your weight with “I” statements.
TRY: “I feel like no matter what I do, the weight just comes back again.”

**Emphasize** how your request is connected to other things your health care provider cares about.
TRY: “I’m worried about my health, especially my blood pressure.”

This is one of the reasons why it’s important to focus on both losing weight as well as maintaining that weight loss.
How does Saxenda® work?

Saxenda® addresses your body’s natural response to weight loss

Your body naturally produces an appetite hormone that helps regulate your hunger.

Saxenda® is believed to work in a similar way, regulating your appetite to make you feel less hungry and feel full with less food—which can lead to eating fewer calories and losing weight.

Important Safety Information
What is the most important information I should know about Saxenda®?

Serious side effects may happen in people who take Saxenda®, including:

- Possible thyroid tumors, including cancer. Tell your health care professional if you get a lump or swelling in your neck, hoarseness, trouble swallowing, or shortness of breath. These may be symptoms of thyroid cancer. In studies with rats and mice, Saxenda® and Victoza® caused thyroid tumors, including thyroid cancer. It is not known if Saxenda® will cause thyroid tumors or a type of thyroid cancer called medullary thyroid carcinoma (MTC) in people.

- Do not use Saxenda® if you or any of your family have ever had MTC, or if you have an endocrine system condition called Multiple Endocrine Neoplasia syndrome type 2 (MEN 2).

Who should not use Saxenda®?

Do not use Saxenda® if:

- you are allergic to liraglutide or any of the ingredients in Saxenda®. Symptoms of a serious allergic reaction may include: swelling of your face, lips, tongue, or throat, fainting or feeling dizzy, very rapid heartbeat, problems breathing or swallowing, and severe rash or itching

- Talk with your health care provider if you are not sure if you are pregnant or planning to become pregnant. Saxenda® may harm your unborn baby

Before taking Saxenda®, tell your health care provider about all of your medical conditions, including if you:

- have any of the conditions listed in the section “What is the most important information I should know about Saxenda®”

Important Safety Information
Who should not use Saxenda? (cont’d)

- are taking certain medications called GLP-1 receptor agonists

- are allergic to liraglutide or any of the other ingredients in Saxenda®

- have severe problems with your stomach, such as slowed emptying of your stomach (gastroparesis) or problems with digesting food

- have or have had problems with your pancreas, kidneys or liver

Please see additional Important Safety Information throughout and enclosed Prescribing Information, including Medication Guide.
How much weight can I lose?

Saxenda® was clinically tested and proven in a study of 3,731 patients.®

<table>
<thead>
<tr>
<th>OF PEOPLE TAKING SAXENDA®</th>
<th>achieved significant weight loss of 5% or more&lt;sup&gt;b,c,d&lt;/sup&gt;</th>
<th>An average of 12 lb</th>

</table>

• For patients taking placebo: 5% or more weight loss was achieved by 34% of patients, 10% or more weight loss was achieved by 15% of patients, and 20% or more weight loss was achieved by 3% of patients

Results are from a 56-week study of 3,731 adults with body mass index (BMI) of 27 to 29.9 with at least one weight-related condition, or BMI of at least 30, not including adults with type 2 diabetes. In this study, 2,487 patients received Saxenda® and 1,244 received placebo. Both groups also received a reduced-calorie diet and physical activity counseling.

<sup>b</sup>When taking Saxenda® added to a reduced-calorie meal plan and increased physical activity, compared with people not on the drug.

<sup>c</sup>3 out of 5=62%; 1 out of 3=34%.

<sup>d</sup>Individual results may vary.

Important Safety Information
Who should not use Saxenda® (cont’d)

- have or have had depression or suicidal thoughts
- are pregnant or plan to become pregnant. Saxenda® may harm your unborn baby. Tell your health care provider if you become pregnant while taking Saxenda®. If you are pregnant you should stop using Saxenda®
- are breastfeeding or plan to breastfeed. It is not known if Saxenda® passes into your breast milk. You and your health care provider should decide if you will take Saxenda® or breastfeed. You should not do both without talking with your health care provider first

Important Safety Information
Who should not use Saxenda® (cont’d)

Tell your health care provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Saxenda® slows stomach emptying and can affect medicines that need to pass through the stomach quickly. Saxenda® may affect the way some medicines work and some other medicines may affect the way Saxenda® works. Tell your health care provider if you take diabetes medicines, especially sulfonylurea medicines or insulin.

How should I use Saxenda®?

- Inject your dose of Saxenda® under the skin (subcutaneous injection) in your stomach area (abdomen), upper leg (thigh), or upper arm, as instructed by your health care provider. Do not inject into a vein or muscle
- Never share your Saxenda® pen or needles with another person. You may give an infection to them, or get an infection from them
Can I keep the weight off?

CLINICAL STUDY

In a 3-year study, 2,254 adults with pre-diabetes and BMI ≥30 or ≥27 with one or more weight-related conditions were given Saxenda® (1,505 people) or placebo (749 people) added to a reduced-calorie meal plan and increased physical activity. The study looked at how many people lost ≥5% of their body weight. At year 1, 817 people on Saxenda® (56%) lost ≥5% of their weight vs 182 patients on placebo (25%). After 3 years, 747 people on Saxenda® and 322 people on placebo remained and had their weight measured. 391 of those people on Saxenda® (26%) lost ≥5% of their weight at both the 1- and 3-year marks vs 74 people on placebo (10%).

When taking Saxenda® added to a reduced-calorie meal plan and increased physical activity, compared with people not on the drug.

56% OF PEOPLE TAKING SAXENDA® FOR 3 YEARS

- For people taking placebo: 25% achieved significant weight loss at year 1, and 10% maintained weight loss at 3 years a,b

Important Safety Information

What are the possible side effects of Saxenda®?

Saxenda® may cause serious side effects, including:

- possible thyroid tumors, including cancer
- inflammation of the pancreas (pancreatitis). Stop using Saxenda® and call your healthcare provider right away if you have severe pain in your stomach area (abdomen) that will not go away, with or without vomiting. You may feel the pain from your abdomen to your back
- gallbladder problems. Saxenda® may cause gallbladder problems, including gallstones. Some gallbladder problems need surgery. Call your health care provider if you have any of the following symptoms: pain in your upper stomach (abdomen), fever, yellowing of your skin or eyes (jaundice), and clay-colored stools
- low blood sugar (hypoglycemia) in people with type 2 diabetes who also take medicines to treat type 2 diabetes. Saxenda® can cause low blood sugar in people with type 2 diabetes who also take medicines used to treat type 2 diabetes (such as sulfonylureas). In some people, the blood sugar may get so low that they need another person to help them. If you take a sulfonylurea medicine, the dose may need to be lowered while you use Saxenda®. Signs and symptoms of low blood sugar may include: shakiness, sweating, headache, drowsiness, weakness, dizziness, confusion, irritability, hunger, fast heartbeat, and feeling jittery. You should check your blood sugar before you start taking Saxenda® and while you take Saxenda®

Please see additional Important Safety Information throughout and enclosed Prescribing Information, including Medication Guide.
How do I take Saxenda®?

Saxenda® is a once-daily medicine that comes in a prefilled pen.

**YOU CAN SELF-INJECT YOUR MEDICINE EACH DAY AT ANY TIME, WITH OR WITHOUT FOOD**

**Recommended dosing schedule to minimize potential side effects such as nausea:**

<table>
<thead>
<tr>
<th>WEEK</th>
<th>Dose (mg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0.6</td>
</tr>
<tr>
<td>2</td>
<td>1.2</td>
</tr>
<tr>
<td>3</td>
<td>1.8</td>
</tr>
<tr>
<td>4</td>
<td>2.4</td>
</tr>
<tr>
<td>5</td>
<td>3.0</td>
</tr>
</tbody>
</table>

START your dose at 0.6 mg

INCREASE your dose by 0.6 mg each week

STAY when you reach 3.0 mg

FULL DOSE

If you experience side effects with the increased dose, call your health care provider to see if you should adjust your dosing schedule. Be sure to continue to the full 3.0-mg dose.

What are the possible side effects?

The most common side effects of Saxenda® are:

<table>
<thead>
<tr>
<th>Side Effect</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nausea</td>
<td>Decreased appetite</td>
</tr>
<tr>
<td>Diarrhea</td>
<td>Upset stomach</td>
</tr>
<tr>
<td>Constipation</td>
<td>Tiredness</td>
</tr>
<tr>
<td>Headache</td>
<td>Dizziness</td>
</tr>
<tr>
<td>Vomiting</td>
<td>Stomach pain</td>
</tr>
<tr>
<td>Low blood sugar (hypoglycemia)</td>
<td>Change in enzyme (lipase) levels in your blood</td>
</tr>
</tbody>
</table>

Tell your health care provider if you have any side effects that bother you or don’t go away.

The most common side effect you may experience when you first start Saxenda® is nausea. This usually gets better as your body gets used to the medicine.

If you do experience nausea, here are some things that may help:

- Eat bland, low-fat foods, like crackers, toast, and rice
- Eat foods that contain water, like soups and gelatin
- Don’t lie down after you eat
- Go outside to get some fresh air

Important Safety Information

What are the possible side effects of Saxenda®? (cont’d)

- increased heart rate. Saxenda® can increase your heart rate while you are at rest. Your health care provider should check your heart rate while you take Saxenda®. Tell your health care professional if you feel your heart racing or pounding in your chest and it lasts for several minutes when taking Saxenda®
- kidney problems (kidney failure). Saxenda® may cause nausea, vomiting, or diarrhea leading to loss of fluids (dehydration). Dehydration may cause kidney failure, which can lead to the need for dialysis. This can happen in people who have never had kidney problems before. Drinking plenty of fluids may reduce your chance of dehydration. Call your health care provider right away if you have nausea, vomiting, or diarrhea that does not go away, or if you cannot drink liquids by mouth

Important Safety Information

What are the possible side effects of Saxenda®? (cont’d)

- serious allergic reactions. Serious allergic reactions can happen with Saxenda®. Stop using Saxenda® and get medical help right away if you have any symptoms of a serious allergic reaction
- depression or thoughts of suicide. You should pay attention to any mental changes, especially sudden changes, in your mood, behaviors, thoughts, or feelings. Call your health care provider right away if you have any mental changes that are new, worse, or worry you
